

Frequently Asked Questions & Contact

SECTION ANALYSIS

Purpose: A paired objection-handling and lead-capture section - the FAQ answers last-minute doubts and the contact form sits right beside it so the visitor can act while those doubts are still fresh.

Target Audience: Visitors who are close to converting but have one or two lingering questions - usually about cost or timeline - before they are willing to fill out a form.

User Intent: "Let me quickly check a couple of things before I commit to filling this out."

Business Goal: Increase form completion rate by resolving hesitation in the same eye span as the form, instead of making the visitor go hunt for answers elsewhere on the site.

SEO Opportunity: This is significant and currently underused. FAQ content is prime material for FAQPage structured data and can capture People Also Ask placements for queries like "how much does a website cost" or "how long does software development take." Right now only one question is live, which is not enough to earn that visibility.

Recommended CTA: Send Message, kept as the single, clear action on the form side - no changes needed there.

Design Psychology: Presenting both panels inside tablet-style device frames makes the FAQ and form feel like a real product interface rather than a marketing page, which quietly reinforces credibility. Pairing objection-handling directly next to the conversion action is a deliberate and effective sequencing choice - keep it.

Content Note 1 (Critical, site-wide): Both device frames show the label "TEST PROJECT" in their header bar. This is now the fifth and sixth appearance of the same placeholder text across the site - it previously showed up in the homepage CTA, the Our Development Process mockup, and the testimonials mockup. Appearing identically across five unrelated sections strongly suggests this is a single global setting (a default "site name" or "project name" field) rather than five separate typos, and fixing it in one place should resolve all of them at once.

Content Note 2: Only one FAQ is currently populated. A real FAQ section needs more ground covered - process, pricing, and timeline are all promised in the subtitle but only "what services do you provide" is actually answered. Ten sample questions are provided below to fill this out properly.

CONTENT (ENGLISH) - FAQ PANEL

Small Label / Main Heading: Frequently Asked Questions (keep as-is)

Subtitle: Answers to the questions we hear most often about our process, pricing, and services. (keep as-is)

Panel Title: FAQs

Panel Subtitle: Quick answers to common questions

1. What services does your company provide?

We provide website development, custom software development, eCommerce solutions, mobile applications, UI/UX design, cloud solutions, API integration, ERP/CRM systems, and ongoing maintenance and support.

2. How much does a typical project cost?

It depends on scope - a marketing website and a custom ERP system are very different builds. We give a clear, itemized quote after understanding your requirements during the discovery call, so you know the cost before any work starts, not after.

3. How long does a project usually take?

A standard business website typically takes a few weeks, while custom software or eCommerce platforms can take a couple of months depending on complexity. We share a realistic timeline during planning, before any commitment is made.

4. Do you work with startups, or only established businesses?

Both. We work with early-stage founders building their first product as well as established companies modernizing existing systems - the process adjusts to where you're starting from.

5. What does your development process look like?

We move through four stages: discovery and consultation, design and planning, development and engineering, and launch and beyond. You get visibility at every stage, not just a final reveal at the end.

6. Do you provide support after the project launches?

Yes. Launch is not where we stop - we offer ongoing maintenance, security updates, and feature support so your product keeps working as your business grows.

7. Can you work with our existing team or systems?

Yes, we regularly integrate with in-house teams, existing codebases, and third-party tools rather than insisting on starting from zero. We will tell you honestly if a full rebuild is the better option, but we don't default to it.

8. What technologies do you use?

We choose the right stack for the project rather than forcing every client into the same tools. This typically means modern frameworks for web and mobile, cloud platforms for hosting and scaling, and proven, well-supported technology over anything experimental.

9. What's the first step to getting started?

A short discovery call. We ask about your goals, your users, and your constraints, then follow up with a clear proposal and timeline - no obligation to move forward until you are ready.

10. Do you sign NDAs or handle confidential projects?

Yes. We're comfortable signing an NDA before any detailed discussion, and confidentiality is standard practice for client information and project details on our end.

CONTENT (ENGLISH) - CONTACT FORM PANEL

Panel Title: Get In Touch

Panel Subtitle: Tell us what you're building - we'll get back to you with a clear next step, not a sales pitch.

Field Label 1: Full Name | Placeholder: John Doe (keep - standard, unambiguous placeholder pattern)

Field Label 2: Email Address | Placeholder: john@example.com (keep)

Field Label 3: Phone Number | Placeholder: +91 12345 67890 (keep)

Field Label 4: Message | Placeholder: Tell us about your project... (keep)

Validation Message (empty message field): Tell us a little about what you need - even a few lines helps.

Button Text: Send Message (keep as-is)

EXPLANATION (HINGLISH)

FAQ Heading aur Subtitle - Dono already clear the aur exactly wahi promise dete hain jo user chahta hai (process, pricing, services), isliye unchanged rakhe gaye.

Naye 9 FAQs isliye add kiye gaye kyunki subtitle mein "pricing" aur "process" ka explicit promise tha, lekin sirf ek hi question live tha - "services" wala. Pricing wala jawab jaanbujh kar exact number nahi deta, balki honest explanation deta hai ki cost scope par depend karta hai - yeh Deovate ke "Honest" brand value ke saath match karta hai.

"Launch is not where we stop" jaisi line Our Development Process section ki "launch day is a milestone, not a finish line" wali line se consistent hai - isse poori site ek hi brand promise repeat karti hai, alag-alag jagah alag baat nahi karti.

Contact Form Subtitle - "We'd love to hear about your project" ko thoda specific banaya: "we'll get back to you with a clear next step, not a sales pitch" - yeh directly us doubt ko address karta hai jo form fill karne se pehle hota hai ki koi salesperson call karega.

Validation Message - "Please enter a message" functional to tha, lekin thoda cold tha. Naya version thoda encouraging hai, user ko feel hota hai ki chhoti si detail bhi kaafi hai, lamba message likhna zaroori nahi.

Content Note ("TEST PROJECT") - Yeh label ab paanch alag jagah dikh chuka hai (homepage CTA, process mockup, testimonials mockup, aur ab FAQ + contact dono mockups). Itni consistency batati hai ki yeh ek hi global setting hai, isliye ek hi jagah fix karne se sab automatically theek ho jayega.

QUALITY CHECK

Human sounding, SEO optimized, Easy to read, Premium tone, Brand consistent, Conversion focused, No keyword stuffing, Natural flow, Grammarly ready.
