

Our Tech Stack

SECTION ANALYSIS

Purpose: The detailed technology section — each tool gets its own card with an icon, a plain-language description, and a link to its official site. This is the deep version of the lighter logo strip earlier on the page.

Target Audience: Technical evaluators — CTOs, technical co-founders, or a developer a business owner has forwarded the site to for a second opinion.

User Intent: Confirm exactly which frameworks and tools are actually used, and judge whether that matches what my project needs.

Business Goal: Remove technical objections before the visitor reaches the CTA further down the page.

SEO Opportunity: This section should carry the real keyword weight for tech-stack terms — each card's name and description naturally covers a specific technology. The earlier "Technologies We Work With" strip was deliberately kept light so it doesn't duplicate this section's coverage.

Recommended CTA: View All Technologies (shown once 8+ items exist) and the per-card "Official Website" link.

Design Psychology: Letting a technical reader click straight through to a tool's official site is itself a trust signal — it says you're not afraid of them leaving the page to verify what you're claiming.

Template Note: This block renders only a Title and Subtitle (via *section_titles.json* → *home.technologies_grid*), same as the earlier sections. Each individual technology card — name, description, icon, website link — is a separate record managed in the admin panel and is outside the scope of this document.

CONTENT (ENGLISH)

Small Label (not yet wired — see Template Note): What We Build With

Main Heading: Our Tech Stack

Subtitle: Each one links straight to its official site — so instead of taking our word for it, you can go check it yourself.

EXPLANATION (HINGLISH)

Small Label — "What We Build With" isliye rakha kyunki yeh direct hai aur "Built On" (jo hum logo strip section ke liye already use kar chuke hain) se clearly alag hai, taaki dono section same na lagein.

Main Heading — "Our Tech Stack" already clear aur developer-friendly term hai, isliye retain kiya — iska koi behtar alternative nahi tha jo same clarity de.

Subtitle — Yeh line specifically is deep section ko highlight karti hai kyunki har card ke saath official website link diya gaya hai, jo upar wale logo strip mein nahi tha. "Check it yourself" wali honesty generic "cutting-edge stack" claims se zyada convincing hai kyunki visitor ko verify karne ka actual option milta hai.

Template Note — Individual technology cards (naam, description, icon, link) admin panel se manage hote hain, yeh document sirf section heading/subtitle tak limited hai.

QUALITY CHECK

Human sounding, SEO optimized, Easy to read, Premium tone, Brand consistent, No keyword overlap with the earlier "Technologies We Work With" strip, Zero AI/GPT-sounding phrasing, No fabricated stats, Grammarly ready.
