

Companies We've Worked With (Clients Logo Strip)

SECTION ANALYSIS

Purpose: A quick trust strip between Services and Why Choose Us that shows real businesses have already chosen Deovate World, right when a visitor is deciding whether this is a company others actually trust.

Target Audience: Both technical stakeholders doing a fast credibility check and non-technical owners who read recognizable or professional-looking logos as a trust signal, without needing to read a full testimonial.

User Intent: "Have real businesses actually worked with this company, or is this their first project?"

Business Goal: Add quiet, low-effort credibility through association before the visitor reaches the Why Choose Us section.

SEO Opportunity: Real client logos with descriptive alt text (company name plus industry) support image search and general trust signals. This is separate from, and should not duplicate, the dedicated Technologies section further down the same page, which already covers the tech stack in depth.

Recommended CTA: None - this is a scanning strip, not a conversion point.

Design Psychology: A logo carousel reads as "real businesses trust this team" in under a second - faster than a testimonial paragraph can establish the same feeling. That only works, however, if the logos are real; placeholder or generic logos undermine the exact trust the format is designed to build.

Content Note 1 (Critical - code-level finding, not just copy): This section was mislabeled with a "Technologies We Work With" heading despite being named, structured, and coded throughout as a client logos section - the HTML comment reads "Start Clients Logos Section," the CSS class is "clients," the PHP variable is \$clientLogos, and each image's alt text defaults to "Client X." That mislabel has already been corrected in the code to "Companies We've Worked With." The technology/tools content this content note initially defended does not belong here - it already has its own home in the separate Technologies section later on the same page, which pulls from a real Technology database table.

Content Note 2 (Critical, higher priority than the heading fix): When no real client logo data exists in the admin, the code silently falls back to nine generic placeholder images labeled "Client 1" through "Client 9" (assets/front/img/client.png through client9.png). If this fallback is what is currently live, the section is visually implying real client relationships that may not exist - the same category of concern already flagged on the fabricated testimonials. This needs real, permission-cleared client logos added through the admin before publishing, not just a heading correction. If real client logos are not yet available, it would be more honest to remove or hide

this section temporarily than to publish it with placeholder logos under a "Companies We've Worked With" heading.

CONTENT (ENGLISH)

Small Label: Not currently wired in the code (title and subtitle only). Optional addition if added later: Trusted By

Main Heading: Companies We've Worked With (matches the code fix already applied)

Subtitle: A few of the businesses we've partnered with to design, build, and grow. (Deliberately does not restate a specific client count or number - the site already has multiple conflicting client/project stats flagged elsewhere in this review, and this strip should not add a fourth.)

EXPLANATION (HINGLISH)

Main Heading - "Companies We've Worked With" seedha aur honest hai - yeh exactly wahi batata hai jo section dikhata hai (client logos), bina kisi cleverness ke. Pehle wala "Technologies We Work With" copy-paste mistake tha, kyunki neech page mein already ek alag, dedicated Technologies section maujood hai apne khud ke real data ke saath.

Subtitle - Jaan-boojh kar koi specific number nahi likha (jaise "50+ clients"), kyunki is poore review mein already teen-char alag "projects/clients" figures mismatch mile hain (50+, 120+, 150+, 35+, 50+). Yahan ek aur number add karna confusion aur badhata.

Sabse Important Baat - Sirf heading fix karna kaafi nahi hai. Code mein clearly likha hai ki agar real client logos admin mein nahi hain, to system automatically 9 generic "Client 1" se "Client 9" tak ke placeholder images dikha deta hai. Agar abhi yehi ho raha hai, to "Companies We've Worked With" heading ke saath fake-looking logos dikhana bilkul waise hi misleading hoga jaise fake testimonials publish karna - isse pehle real client logos (client ki permission ke saath) add karna zaroori hai.

QUALITY CHECK

Human sounding, SEO optimized, Easy to read, Premium tone, Brand consistent, No overlap with the later Technologies section, No fabricated client claims, Grammarly ready. Note: this section should not go live with placeholder logos - see Content Note 2.
